What *is* Codex?

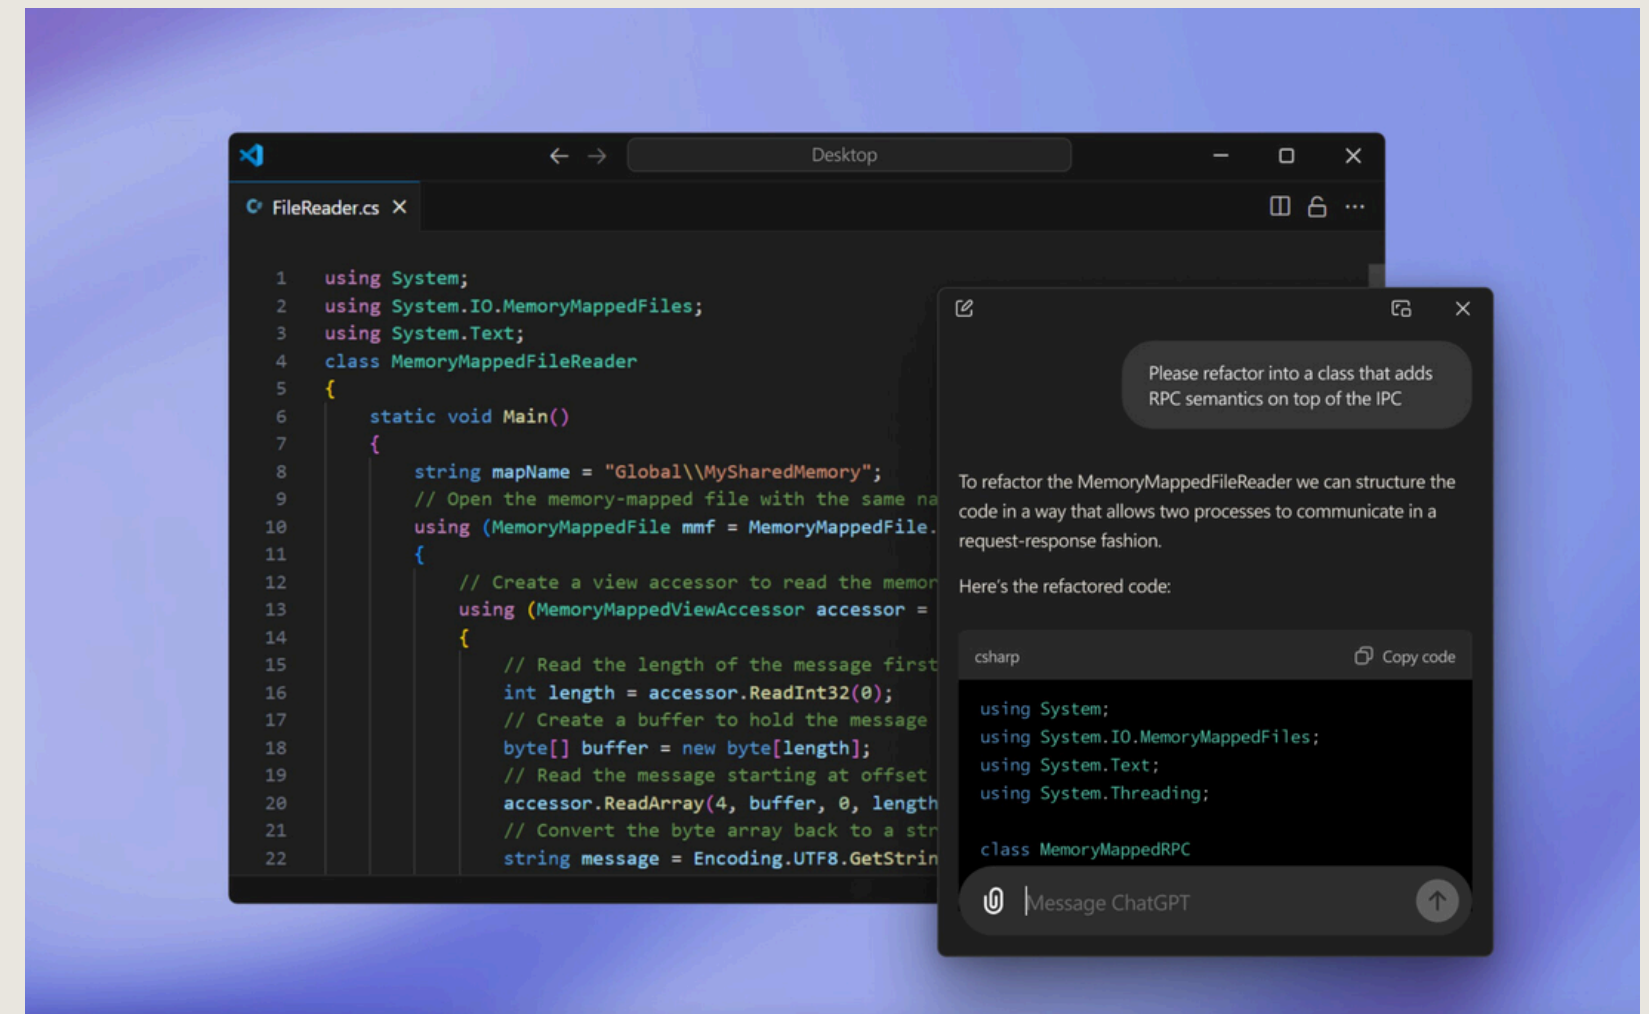

- Codex is an open-source AI coding agent developed by OpenAI
- It allows you to automate software engineering tasks and workflows

Different Interfaces of Codex

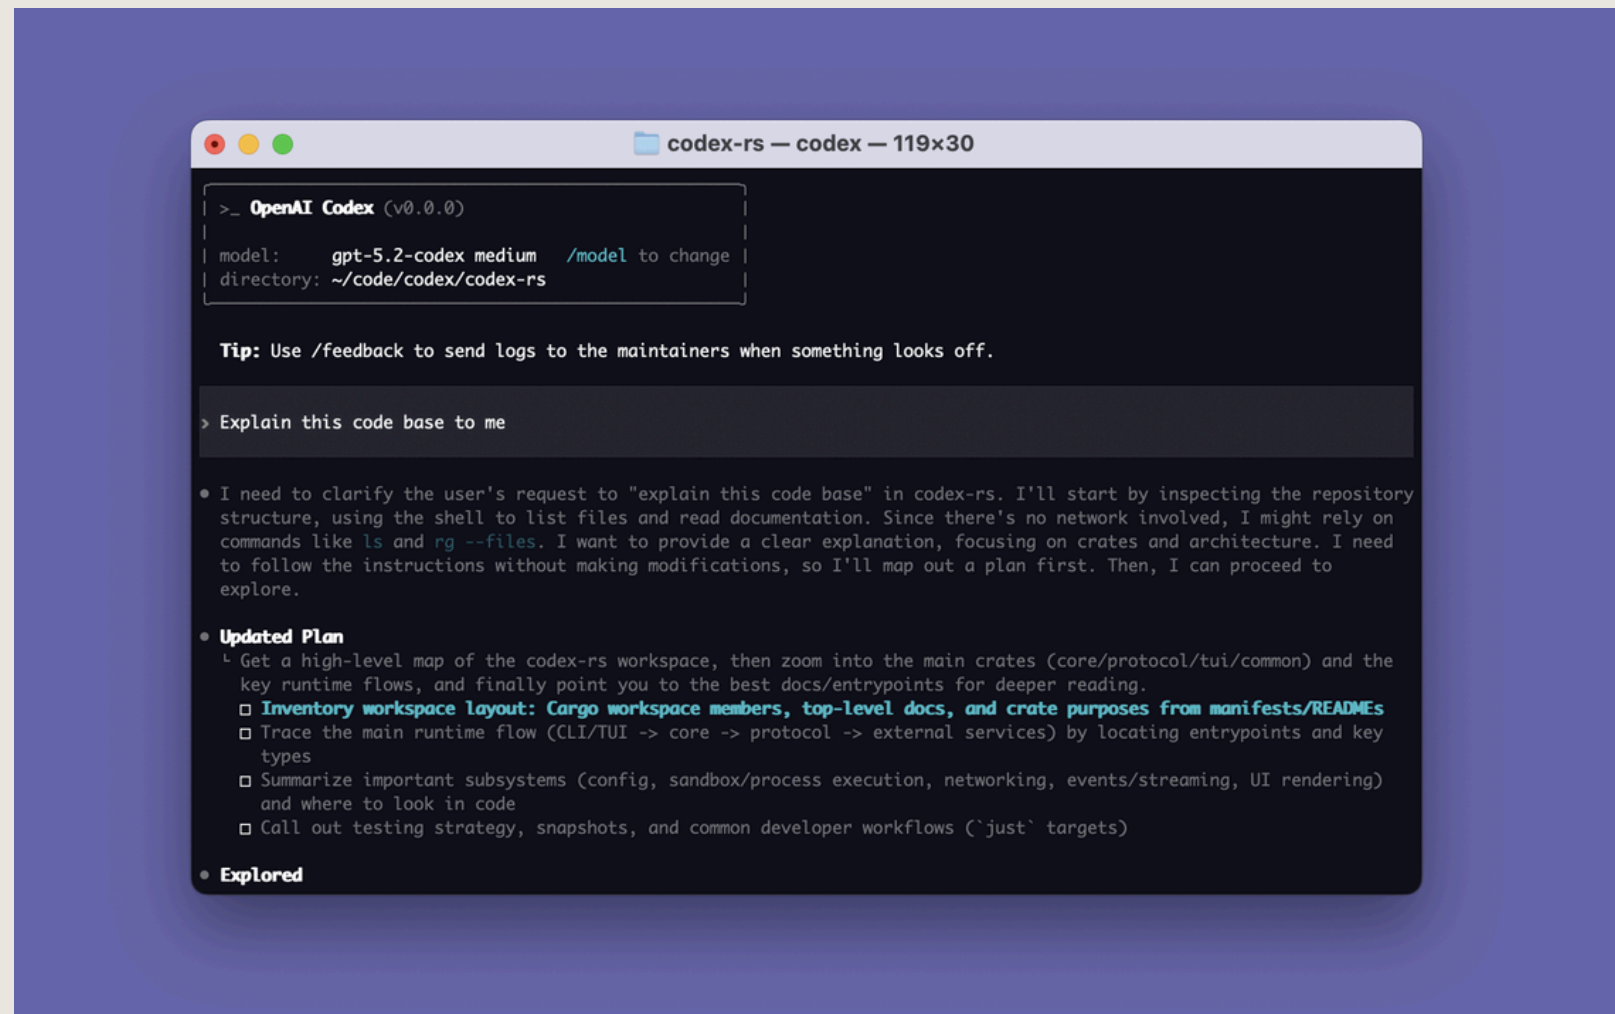

Codex CLI

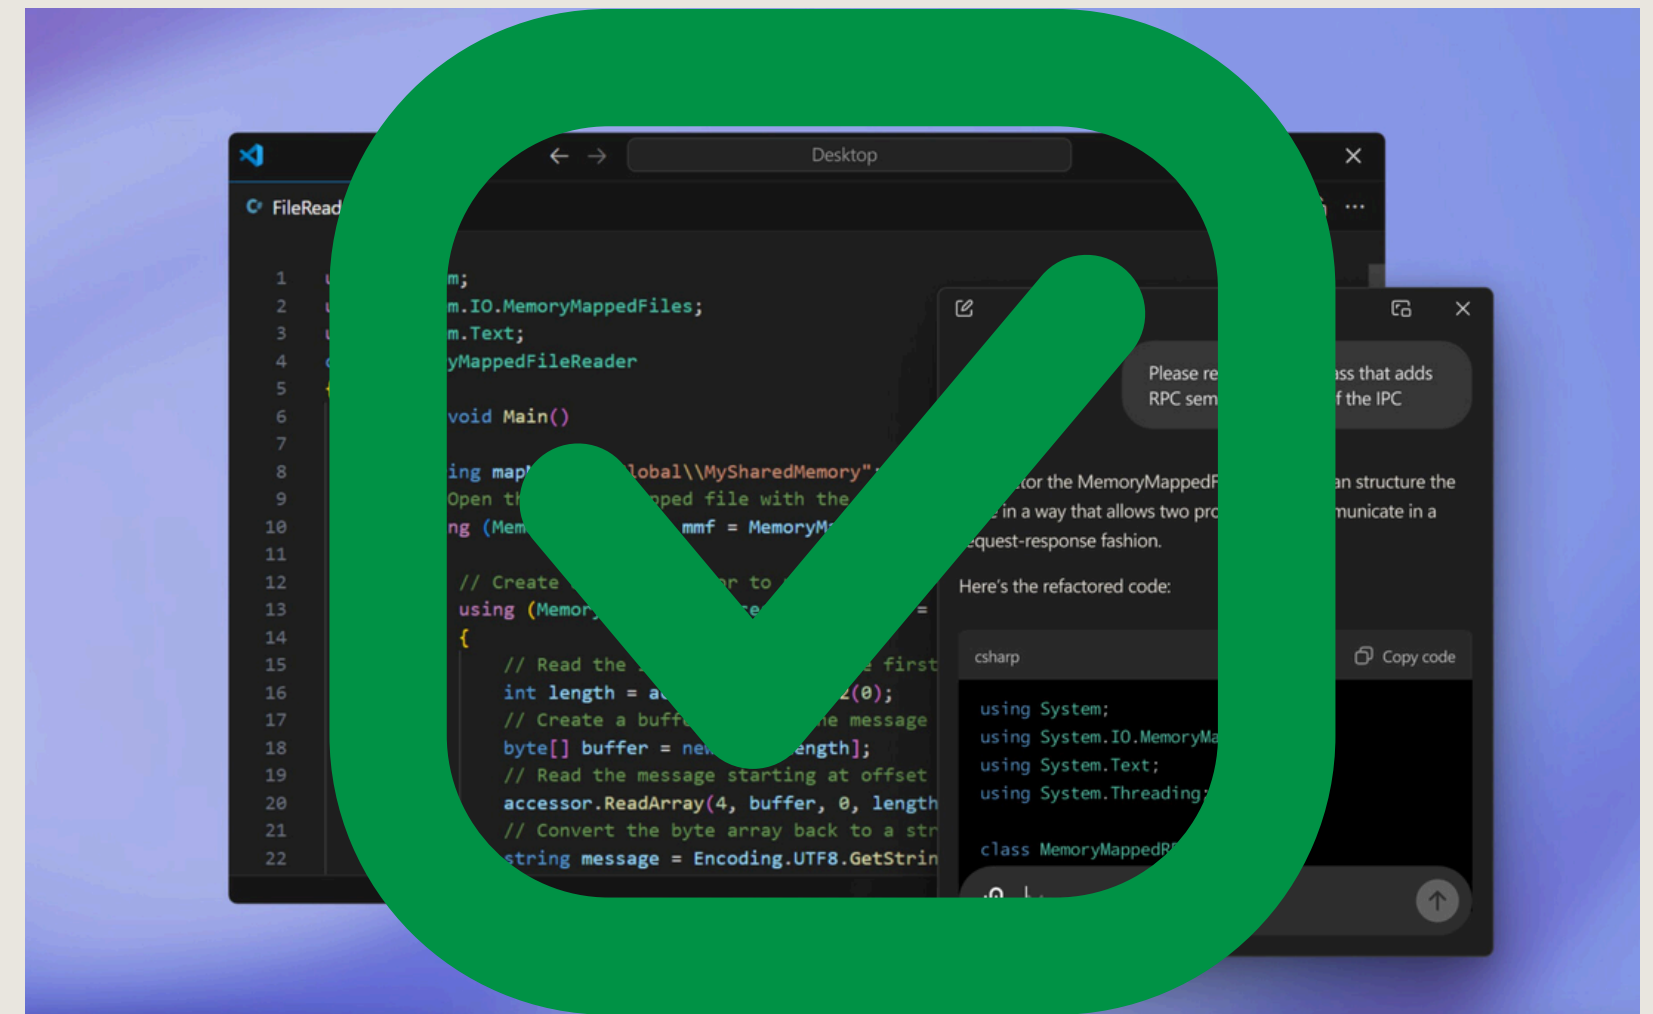

Codex App

Different Interfaces of Codex

Codex CLI

Codex App

Install Codex

Quickstart

Get started with Codex CLI

Install Codex, sign in, and run your first task from a project directory.

1 Install Codex

macOS/Linux Windows npm Homebrew

Install the Codex CLI with the standalone installer for macOS and Linux.

Install Codex

```
curl -fsSL https://chatgpt.com/codex/install.sh | sh
```

Update Codex

```
curl -fsSL https://chatgpt.com/codex/install.sh | sh
```

Important Commands in Codex

*You can simply
type `/` anytime.
You don't need to
memorize these*

Command	What it does
/plan	Thinks through an approach before implementation
/goal	Gives a persistent objective. Agent will continuously work until this objective is reached.
/review	Compares against a branch and reviews changes
/side	Ask about something on the side without interrupting the main task
/compact	Compress a long conversation's context.
/status	See context and session information

MCP | MCP Server

-> Model Context Protocol (MCP) provides a standardized way for an agent to connect to tools, services, and live data sources.

Plugins

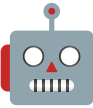

Plugins *extend* what Codex can actually do.

- Plugins are packages that bundle skills, app integrations and auth, and MCP server configurations to extend your agent's capabilities.

Without Plugin

: "When am I free tomorrow afternoon?"

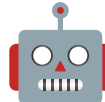

: "I don't even have access to your calendar man 🙄"

With Plugin

: "When am I free tomorrow afternoon?"

: "You're free from 2:30-4:00 PM"

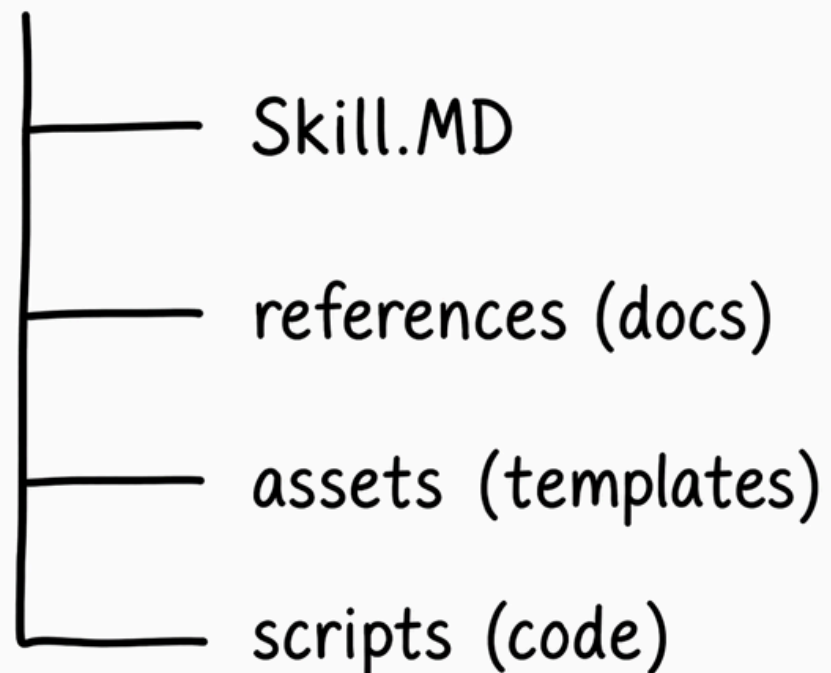

Skills

Skills are *reusable* instructions that our agent can use for specific tasks

Skills

Skills are *reusable* instructions that our agent can use for specific tasks

skill-name/

name	frontend-design
description	Guidance for distinctive, intentional visual design when building new UI or reshaping an existing one. Helps with aesthetic direction, typography, and making choices that don't read as templated defaults.
license	Complete terms in LICENSE.txt

Frontend Design

Approach this as the design lead at a design studio known for giving every client a distinct visual identity that is not mistaken for anyone else's. This client has already rejected proposals that felt cliché or templated, and is paying for a distinctive point of view: make deliberate, opinionated choices about palette, typography, and layout that are specific to this brief, and take aesthetic risk if justified.

Ground your designs in the subject matter

If the brief does not identify what the product or subject matter is, identify it yourself before designing, and confirm with the client. You can come up with one concrete subject, the design's audience, and the design's primary job, as a proposal. If there's any information in your memory about the client's preferences or context about what they're building, use that as a hint. The subject's industry, subject matter, materials, and vernacular are where distinctive visual choices come from — a design for a toy for girls aged 8–11 will be very aesthetically different from a dashboard for financial analysts. Build with the brief's real content and subject matter throughout.

Thank You!
